

SYSTEM AND METHOD FOR REMOTE MONITORING AND CONTROLLING  
OF FACILITY ENERGY CONSUMPTION

5 ABSTRACT OF THE INVENTION

10 A method for remote monitoring and controlling of  
energy consumption of a facility includes receiving  
energy consumption data associated with the facility at a  
processor disposed remotely from the facility. The  
method also includes receiving environmental data  
associated with the facility. The method includes  
determining whether an operating parameter of an energy  
consumption system of the facility requires modification  
to increase efficiency using the energy consumption data  
15 and the environmental data. The method further includes  
automatically modifying the operating parameter of the  
energy consumption system corresponding to the required  
modification.
